

Sherif Osama Shaarawy

Backend Developer | ASP.NET Core | C#

Alexandria, Egypt | +20 120 040 2068 | sherifosama172@gmail.com | github.com/Sherif-Osama | linkedin.com/in/sherif-osama-dev

SUMMARY

Junior Backend Developer experienced in building RESTful APIs with ASP.NET Core, C#, and SQL Server, with a strong foundation in database design, testing, and backend architecture.

EXPERIENCE

Independent Software Developer

2026 – Present

- Designed and built scalable backend applications and custom software solutions.
- Applied Clean Architecture, Layered Architecture, and SOLID principles for maintainable code.
- Designed relational databases and optimized queries for performance at scale.
- Performed system analysis, debugging, refactoring, and performance optimization.
- Implemented secure coding practices and wrote tests to improve reliability.

SELECTED PROJECTS

School Management System — ASP.NET Core Web API

Jul 2026 – Aug 2026

- **Architected** a 159-endpoint REST API across 26 controllers (API/BLL/DAL), fully interface-driven for testability and maintainability.
- **Built** defense-in-depth authorization: dynamic permission-based access control plus resource-level ownership checks enforced against the database.
- **Hardened** authentication with JWT access tokens, rotating single-use refresh tokens, BCrypt hashing, and a non-blocking async logging pipeline.
- **Validated** the business layer with 524 unit tests (xUnit, Moq) covering full validation and failure paths via mocked data-layer dependencies.
- **Modeled** complex domain logic — conflict-free scheduling, academic-year integrity, grading rules — entirely in the business layer.
- **Engineered** a high-throughput async data layer (195+ methods) on raw ADO.NET and SQL Server stored procedures, zero ORM overhead.

Task Management REST API — ASP.NET Core

Jul 2026

- **Built** an 11-endpoint REST API across a 4-layer Clean Architecture solution (Domain/Application/Infrastructure/API) with interface-driven DI.
- **Built** composable IQueryable filtering, sorting, search, and pagination for task queries with zero N+1 queries.
- **Enforced** business rules (unique names, cascade deletes, due-date validation, status-transition logging) at the application and database layers, backed by EF Core migrations and targeted indexes.
- **Wrote** 52 unit and integration tests (xUnit) covering core business logic and 3 critical end-to-end API flows.

SKILLS

Languages: C#

Backend: ASP.NET Core, .NET, REST APIs, Entity Framework Core, ADO.NET, Worker Services

Database: SQL Server, T-SQL, Database Design (Normalization, ERD, Indexing)

Testing: xUnit, Moq, Unit & Integration Testing

Tools & Concepts: Git, GitHub, Swagger/OpenAPI, OOP, SOLID, Data Structures & Algorithms

EDUCATION

Alexandria University — B.Sc. in Agriculture

Sep 2023 – Present
